

# Clearcreek Road Department

## Monthly Report

January 2023

During January, crews poured a concrete pad for the new 6,000-gallon Beet Heet ice melt container and installed the tank. After installing the tank, crews dressed the area with gravel. Along with the new tank, crews designed a manifold system to allow crews to pump and refill tanks with only one pump. The system includes five storage tanks and a 500-gallon mixing tank.

Additionally, crews assembled and organized shelving units for truck maintenance and repair supply storage.

The Road Maintenance Department took delivery of a new backhoe in January. The backhoe comes equipped with a clam bucket, a 1.75-yard bucket, pallet forks, and a 12" bucket for curb repair.

Multiple snowstorms affected the township, with approximately 8" to 10" of accumulation throughout the month. During these events, crews worked continually to clear and treat roadways.
