

Clearcreek Road Department

Monthly Report

February 2023

Road Crews completed several indoor jobs during February. Crews started by converting an old storage room into a bathroom. Next, crews began building a new multi-person workbench. The previous workbench only allowed room for one individual at a time. Using an old street plate, crews made a new 6' x 10' workbench allowing room for multiple people to use the space at once. Additionally, the new workbench provides additional storage space under the table.

Finally, crews fabricated and installed ice melt solution tanks on the one-ton trucks. After researching various arrangements, crews agreed on an optimal installation and began with a mock-up. With only minor changes, Road Crews installed the tanks and in-cab controls successfully. We are pleased with our department's setup, build, and in-house design.

In preparation for Spring, crews also cleaned and serviced the roadside mower.
